IPS e.max® Ceram Selection

IPS e.max® Ceram Selection offers new Enamel and Effect materials that will inspire professionals with their brilliant shades and impressive light optical properties.

IPS e.max Ceram Selection comprises twelve materials that are especially designed to give professionals more room for creativity and individuality in the layering technique. The materials are used in combination with the existing IPS e.max Ceram materials and facilitate the creation of individualized characteristics - with the aim to achieve highly esthetic, natural looking restorations.

The renowned dental technicians Oliver Brix (Germany), August Bruguera (Spain) and Gérald Ubassy (France) have substantially shaped the concept on which IPS e.max Ceram Selection is based. The specially shaded materials and their application are the result of many years of successful work with IPS e.max Ceram.

The twelve shades are divided into three groups:

- Special Enamel
shaded Enamel materials
- Light Reflector
light reflecting Effect materials
- Light Absorber
light absorbing Effect materials

Made to create nature

Created from passion
and experience ...

... with the aim to copy nature
as closely as possible ...

... and the aspiration
to share this knowledge.

Oliver Brix, DT, Germany

August Bruguera, DT, Spain

Gérald Ubassy, DT, France

Special Enamel

The six Special Enamel materials are differently shaded Enamel materials that feature an enamel-like translucency.

Light Reflector

The three Light Reflector materials are light reflecting Effect materials.

Light Absorber

The three Light Absorber materials are light absorbing Effect materials.

Material Selection Guide

Area of application

Shade and translucency

(Shade tab with a layer thickness of 1 mm)

Special Enamel

aqua

Intensive Enamel material to enhance the translucent bluish effect along the incisal margins

Special Enamel

citrine

Yellowish Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

Special Enamel

honey

Honey-coloured Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

Special Enamel

apricot

Apricot-coloured Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

Special Enamel

quartz

Warm grey Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

Special Enamel

diamond

Shade-neutral universal Incisal material for the anterior region

Light Reflector

cream

Cream-coloured Effect material for reproducing colour reflecting areas in the cervical and incisal third

Light Reflector

salmon

Salmon-coloured Effect material for reproducing colour reflecting areas in the cervical and incisal third

Light Reflector

silk

Whitish Effect material for increasing the brightness value in the incisal area

Light Absorber

fog

Greyish Effect material for reducing the brightness value in the incisal area

Light Absorber

lavender

Lilac-coloured Effect material for creating absorption areas in the incisal and cervical third and in the proximal areas

Light Absorber

taupe

Lilac-brown Effect material for creating absorption areas in the incisal and cervical third and along the proximal areas
